Amazon EMR

EMR on EC2: Clusters

Cluster2

Cluster2

Updated 3 minutes ago

Terminate

Clone in AWS CLI

Clone

This EMR release reaches End of Support on Aug-01-2026 and will no longer be eligible for technical support. AWS strongly recommends that you run your workloads on the latest Amazon EMR release to receive security-critical updates and fixes. You can also use new Spark upgrade agent to modernize your existing applications on version 5.40 or higher to latest EMR version. To learn more, see [EMR Standard Support policy](#) and [Spark Upgrades](#).

Summary

Cluster info

Cluster ID
j-2ESRHJC80Y4UM

Cluster ARN
arn:aws:elasticmapreduce:us-east-1:654654400554:elasticmapreduce:54:cluster/j-2ESRHJC80Y4UM

Cluster configuration
Instance groups

Capacity
1 Primary 1 Core 0 Task

Applications

Amazon EMR version
emr-5.20.1

Installed applications
Ganglia 3.7.2, Hadoop 2.8.5, Hive 2.3.4, Hue 4.3.0, Tez 0.9.1

Cluster management

Log destination in Amazon S3
aws-logs-654654400554-us-east-1/elasticmapreduce

Primary node public DNS
ec2-54-87-197-50.compute-1.amazonaws.com

Connect to the Primary node using SSH
Connect to the Primary node using SSM

Status and time

Amazon EMR > EMR on EC2: Clusters > Create cluster

Tags Info

Use tags to search and filter for resources, and track AWS costs associated with your cluster.

Software settings Info

Override the default configurations for specific applications on your cluster.

Security configuration and EC2 key pair Info

Choose a security configuration or create a new one that you can reuse with other clusters.

Security configuration

Select your cluster encryption, authentication, authorisation and instance metadata service settings.

Create key pair

Identity and Access Management (IAM) roles - required Info

Choose or create a service role and instance profile for the EC2 instances in your cluster.

Amazon EMR service role Info

The service role is an IAM role that Amazon EMR assumes to provision resources and perform service-level actions with other AWS services.

Amazon EMR > EMR on EC2: Clusters > Create cluster

Service role

Select a default service role or a custom role with IAM policies attached so that your cluster can interact with other AWS services.

EMR_DefaultRole

EC2 instance profile for Amazon EMR

The instance profile assigns a role to every EC2 instance in a cluster. The instance profile must specify a role that can access the resources for your steps and bootstrap actions.

Choose an existing instance profile

Select a default role or a customised instance profile with IAM policies attached so that your cluster can interact with your resources in Amazon S3.

EMR_EC2_DefaultRole

Custom automatic scaling role - optional

When a custom automatic scaling rule triggers, Amazon EMR assumes this role to add and terminate EC2 instances. [Find out more](#)
